Technical Product Manager Robotics & AI

Summary

Robotics engineer turned product manager. MSc in Mechatronics & Control, an IROS 2022 publication, and two years leading both product and engineering of a medical tabletop robot at EPFL — where discovery with clinicians drove a pivot from education to stroke rehabilitation. Since then, senior B2B SaaS product roles (Timly, Frontify): founding-PM work, platform and ecosystem strategy across ~100 integrations, AI governance, and commercial outcomes including 2× ARR growth two years running. Equally at home in a quaternion state estimator and a quarterly business review; most useful in between — turning what technology can do into products customers pay for.

Core Skills

Robotics & Control: Dynamics Modeling, Nonlinear Control (Feedback Linearization, Sliding Mode), Kalman Filtering (EKF/UKF), ROS, Path Planning, Haptics

Embedded & Sensing: STM32, Intel NUC, LiDAR, Cameras, IMU, Sensor Fusion, Real-time Systems, 3D Printing

AI & Data: Computer Vision, Machine Learning, RAG/LLM Discovery, AI Governance (C2PA, EU AI Act), Model Evaluation

Product Leadership: 0-to-1 Discovery, Roadmaps, Prioritization, Clinical & Enterprise Stakeholders, Business Cases

Platform: APIs, SDKs, Integration Architecture, Ecosystem Governance

Tools: Python, C++, MATLAB/Simulink, Unity, Git, Jira, Mixpanel

Selected Robotics Work

- **Ball-Balancing Robot — MSc Thesis (Aalborg University, 2020).** Modeled a 5-DOF underactuated MIMO ballbot using quaternion Lagrangian dynamics; designed unit-norm-preserving Unscented Kalman Filters (orientation + velocity) and a cascade nonlinear feedback-linearization controller, benchmarked against a sliding-mode baseline. MATLAB/Simulink; platform: STM32, Intel NUC, LiDAR, cameras. github.com/VBorjaDD/MasterThesis
- **“Modulo Cellulo: Modular Versatile Tangible Educational Robots” — IROS 2022.** Co-authored publication on the robot platform I led at EPFL.
- **Wall-Painting Construction Robot (startup incubator, Aalborg).** Led business planning and market research for an autonomous painting concept; active in Techstars Kickstart Aalborg.
- **MSc portfolio:** low-cost underactuated gripper • ultrasonic fault detection for concrete/metals • hydraulic press modeling & control.

Work Experience

Senior Product Manager — Ecosystem & Integrations
Frontify

Sep 2025 – Present
Zurich, Switzerland

- Own platform strategy for ~100 integrations, APIs, SDKs, and the emerging third-party Apps platform at an enterprise brand-management (DAM) company.
- Led AI-governance discovery — Content Credentials (C2PA), DRM, watermarking, EU AI Act — growing a single feature request into a company-wide framework aligning product, engineering, legal, and leadership.

- Redirected Frontify's first e-commerce integration after discovery exposed flaws in the original embed concept: drove redesign to a dedicated synchronization architecture, now the reusable pattern for further commerce platforms.
- Initiated the first ecosystem-wide usage-analytics program: cross-functional telemetry foundation for adoption measurement, prioritization, and metering.
- Designed the ecosystem's delivery operating model and ran it while unfilled: 15+ concurrent partner engagements, SOWs, QA, launches, and maintenance.

Product Manager (first PM)
Timly

Feb 2023 – Feb 2025
Zurich, Switzerland

- Built the product function from zero at a SaaS asset-management startup: discovery, prioritization, and delivery practices; instrumentation with Mixpanel, NPS, and session recordings.
- Shifted the organization from feature-factory to product-led delivery focused on outcomes and adoption.
- Results: 2× year-over-year growth in ARR *and* customers, two consecutive years; NPS 4.0 → 7.2.

Lead Engineer & Product Manager
EPFL — CHILI Lab

Feb 2021 – Feb 2023
Lausanne, Switzerland

- Owned product and technical leadership of the Cellulo tabletop robot platform: mechanics, electronics, firmware, ROS integration, Unity SDK, and UX.
- Led discovery with clinicians that repositioned the robot from education to **stroke rehabilitation**; built a gamified tangible therapy validated with hospital partners while exploring a spinout.
- Redesigned the mechanical drive system: path accuracy **80% → 98%**, mechanical cost **−60%**, overall production cost **−30%**.
- Rebuilt electronics (battery, compute) and firmware architecture; robot-orchestration algorithms; patient and clinical-monitoring UIs; Oculus AR proof of concept.
- Published the platform at **IROS 2022** (“Modulo Cellulo”).

Research Assistant — Robotics & Perception
Aalborg University

Oct 2020 – Dec 2020
Aalborg, Denmark

- Applied research in robotics path planning, control, and multi-sensor fusion (cameras, LiDAR, embedded systems) under real-time constraints.

R&D Engineer
Fremco

2018 – 2019
Aalborg, Denmark

- Prototyped sensing and data-acquisition systems for fiber-optic installation machinery; integrated hardware and software validated in field conditions with machine operators.

Technology Consultant — Data & Automation
EY

2017 – 2018
Madrid, Spain

- Delivered computer-vision initiatives (face recognition, traffic monitoring) and contributed to a humanoid-robot project; built financial anomaly detection with random forests.
- Led RPA initiatives reducing manual operations by up to 40% for one of Slovakia's largest B2C conglomerates.

Strategy Analyst
Accenture Strategy

Feb 2016 – Aug 2016
Madrid, Spain

- IoT go-to-market strategy, telecom market positioning, and Video-on-Demand market analysis for technology clients.

Education

MSc in Mechatronics and Control Engineering
Aalborg University

2018 – 2020
Denmark

- Thesis: *Control of a Ball-Balancing Robot* — quaternion dynamics, Unscented Kalman Filter estimation, non-linear feedback-linearization control (see Selected Robotics Work).

BSc in Industrial Engineering (automation focus)
Carlos III University

2013 – 2017
Madrid, Spain

BSc in Software Engineering
King Juan Carlos University

2009 – 2013
Madrid, Spain

Certifications & Publications

- Publication: “Modulo Cellulo: Modular Versatile Tangible Educational Robots” — **IROS 2022**
- PRINCE2® Foundation

Mentorship

- Mentored **8 professionals** across product and engineering disciplines; ongoing mentor with ADPList and the Lenny's Newsletter community.
